Rockaway Borough School District
103 East Main Street
Rockaway, NJ 07866

Re: LEAD IN DRINKING WATER REPORT- FIRST DRAW & FLUSH SAMPLING

Dear Mr. Kline,

Please find enclosed the report for the Lead in Drinking Water – First Draw & Flush Sampling conducted for the Rockaway Borough School District.

We thank you for choosing Westchester Environmental and appreciate your business. We look forward to working with you again. If you have any questions, please contact me at 610-431-7545 or email me at cpiccininni@westchesterenvironmental.com.

Sincerely,

Westchester Environmental, LLC

1.0 EXECUTIVE SUMMARY

Westchester Environmental, LLC (WCE) was contracted by Mr. Mike Klein of the Rockaway Borough School District to conduct lead in water testing for the school district for the 2024-2025 school year.

The water sampling was performed on September 28, 2024 by Christopher Piccininni of Westchester Environmental, LLC.

The objective of the sampling was to determine the lead in water levels associated with the buildings across the district. During this visit, both first and flush drinking water samples were collected at predetermined locations in the following buildings:

1. Lincoln Elementary School – 37 Keller Avenue, Rockaway, NJ 07866
2. Thomas Jefferson Middle School – 98 East Main Street, Rockaway, NJ 07866

Three of the following collected first draw samples, and the corresponding flush sample in the Home Economics Laboratory at Thomas Jefferson Middle School exceeded the lead action level of 15.5 microgram/liter (ug/L) or 15.5 parts per billion (ppb), based on the analysis of lead content using U.S. Environmental Protection Agency (EPA) Method 200.8 for lead in drinking water. (see tables under Section 4 and 5 of this report)

1. Bubbler outside the Main Office
2. Home Economics Laboratory
3. Faculty Room

Immediate Action Required:

Immediately discontinue using water at the above locations in the Thomas Jefferson Middle School where the first draw sample exceeded the NJDEP 15.5 ppb action level. If these locations are going to be remediated for future use, they will need to be re-tested prior to being put in service to make sure the remedial work was successful.

-END OF SECTION-

2.0 INTRODUCTION

The objective of the sampling was to determine the lead in water levels from drinking water outlets located within the two buildings at the Rockaway Borough School District. During this visit, both first and flush drinking water samples were collected.

The purpose was to sample and analyze drinking water for lead content. Lead in school drinking water continues to be a serious concern, with children in many schools potentially drinking water with dangerous levels of lead. Even when water entering a facility meets all federal and state public health standards for lead concentrations, older plumbing materials found in schools can contribute to elevated lead levels in the drinking water.

The New Jersey Department of Environmental Protection's (NJDEP) action level for lead in drinking water is set at 15. However, for the purposes of compliance, any concentration greater than 15 µg/L (as defined as greater than or equal to 15.5 µg/L) is considered to exceed the lead action level. If sampling exceeds the level, then the action needs to be taken.

The Environmental Protection Agency (EPA) itself states that 15 ug/L is not a health-based standard, but rather based on what is feasible for water systems to achieve. According to the EPA, given present technology and resources, this level is the lowest level to which water systems can reasonably be required to control this contaminant should it be present in drinking water.

On October 8, 2024, the Environmental Protection Agency (EPA) announced the finalization of key improvements to the Lead and Copper Rule (LCR), which introduces new regulations that will reshape how public water suppliers manage lead service lines. These changes are critical to protecting public health and will become effective in late 2027, three years after their publication.

One of the most significant changes is the reduction of the lead action level to 10 ug/L. Water systems that exceed this threshold must take immediate corrective actions, including notifying the public, implementing corrosion control treatments, and expediting lead service line replacement.

-END OF SECTION-

3.0 SAMPLING AND ANALYSES

During this sampling event, one point of entry sample, thirty-two first draw samples, thirty-two flush samples, and two field blanks were collected.

All the collected samples were labeled with a unique identification number and transported to Suburban Laboratory for analysis of lead in drinking water using EPA Method 200.8. Suburban Testing Labs located at 1037F MacArthur Rd, Reading, PA 19605, is a NJ certified Lead in Drinking Water testing facility.

The following guidance documents were followed for sampling:

1. New Jersey Department of Education N.J.A.C. 6A:26
2. The USEPA's Revised Technical Guidance - "3Ts for Reduced Lead in Drinking Water in Schools"
3. Guidance Document from NJDEP Division of Water Supply and Geoscience – "Lead in Drinking Water: Guidance for Schools and Child Care Facilities Served by Public Water as well as the Safe Drinking Water Act of 1974".

-END OF SECTION-

4.0 SAMPLE RESULTS

Tables 1 & 2 below show the first draw concentrations of lead (microgram per liter) at sampled locations. Table 3 shows the results of flush draw samples that ran for the corresponding exceedances. The NJDEP establishes 15.5 ug/L as the lead action limit.

Table 1: Thomas Jefferson Middle School

| 3 Thomas Jefferson Middle School | Faculty Room | 9.98 | 15.5 | No |

-END OF SECTION

5.0 DISCUSSION & RECOMMENDATIONS

The tables below detail the first draw samples and the corresponding flush sample that exceeded the action limit of 15.5 ug/L. based on laboratory analysis of the samples.

Table 1: Lead Water Exceedances - **First Draw**

| Building | Location Code | Results (ug/L) | Action Level (ug/L) | Lead Hazard (Yes/No) |
|----------------------------------|-------------------------|----------------|---------------------|----------------------|
| 1 Thomas Jefferson Middle School | Bubbler o/s Main Office | 15.6 | 15.5 | Yes |
| 2 Thomas Jefferson Middle School | Home EC Lab 2 | 121 | 15.5 | Yes |
| 3 Thomas Jefferson Middle School | Faculty Room | 16.7 | 15.5 | Yes |

Table 2: Lead Water Exceedances - **Flush Draw**

| Building | Location Code | Results (ug/L) | Action Level (ug/L) | Lead Hazard (Yes/No) |
|----------------------------------|-------------------------|----------------|---------------------|----------------------|
| 1 Thomas Jefferson Middle School | Bubbler o/s Main Office | 7.64 | 15.5 | No |
| 2 Thomas Jefferson Middle School | Home EC Lab 2 | 31.6 | 15.5 | Yes |
| 3 Thomas Jefferson Middle School | Faculty Room | 9.98 | 15.5 | No |

Action Required:

1. Immediately discontinue using water at the three locations above where the first draw sample exceeded the NJDEP 15.5 ppb Action Level. If these locations are going to be remediated for future use, they will need to be re-tested prior to being put in service to make sure the remedial work was successful.
2. Refer to USEPA's "3Ts for Reducing Lead in Drinking Water in Schools and Child Care Facilities" for other short term and long term suggested remediation measures and notification procedures.
3. Schedule a sampling for the remediated points. A new first and flush sample will then be collected to determine the success or failure of the chosen remediation.

-END OF SECTION-

6.0 DISCLAIMER

The type of samples collected for this assessment are referred to as grab samples. Grab samples are individual discrete samples collected at a specific time and location.

No guarantee or warranty of the findings and conclusions is implied within the intent of this report. It is limited to only those items listed in the report and is a snapshot of the conditions existing at the time of the assessment as conditions may vary with time.

WCE assumes no liability with regards to decisions made or the use of any information contained in this report, which is prepared exclusively for and is confidential to the above noted client. These services are designed to provide an analytical tool to assist the client, and the user(s) of this information must use their own best judgment to determine the appropriate course of action.

Data Qualifiers:

- M2 The Matrix Spike associated with this sample is below established acceptance criteria, indicating potential matrix interference. Results of this sample may be biased low.
- M3 The Matrix Spike associated with this sample is above established acceptance criteria, indicating potential matrix interference. Results of this sample may be biased high.

Sample Receipt Conditions:

All samples met the sample receipt requirements for the relevant analyses.

The test *pH, Lab* is performed in the Laboratory as soon as possible. These results are not appropriate for compliance with NPDES, SDWA, or other regulatory programs that require analysis within 15 minutes of sample collection and should be considered for informational purposes only.

**pH, Final* for ASTM leachate is performed by method SM 4500-H-B.

All results meet the requirements of STL's NELAP Accredited Quality System unless otherwise noted. If your results contain any data qualifiers or comments, you should evaluate useability relative to your needs.

If collectors initials include "STL", samples have been collected in accordance with STL SOP SL0015.

All results reported on an As Received (Wet Weight) basis unless otherwise noted.

This laboratory report may not be reproduced, except in full, without the written approval of STL.

Results are considered Preliminary unless report is signed by authorized representative of STL.

Report Generated On: 10/16/2024 9:46 am
STL_Results Revision #3.0

4J02543
Effective: 05/29/2024

SUBURBAN TESTING LABS

The test *pH, Lab* is performed in the Laboratory as soon as possible. These results are not appropriate for compliance with NPDES, SDWA, or other regulatory programs that require analysis within 15 minutes of sample collection and should be considered for informational purposes only.

**pH, Final* for ASTM leachate is performed by method SM 4500-H-B.

All results meet the requirements of STL's NELAP Accredited Quality System unless otherwise noted. If your results contain any data qualifiers or comments, you should evaluate useability relative to your needs.

If collectors initials include "STL", samples have been collected in accordance with STL SOP SL0015.

All results reported on an As Received (Wet Weight) basis unless otherwise noted.

This laboratory report may not be reproduced, except in full, without the written approval of STL.

Results are considered Preliminary unless report is signed by authorized representative of STL.
